RANGER-U120²³

The **RANGER-U120²³** is an airborne laser scanner with an impressive combination of weight, range, accuracy and pulse rate. It is equipped with a unique forward and rear looking FOV designed to minimize laser shadowing and provide geometry on complex vertical structures on a single pass. With its wide field of view of 100 degrees and an extremely fast pulse repetition rate of up to 2400kHz, the **RANGER-U120²³** is perfectly suited for high point density corridor mapping applications such as power line, railway track and pipeline inspection.

FEATURES

- Modular and upgradable for maximum project flexibility, supporting single/dual RGB, and multispectral cameras
- Easily mountable to unmanned platforms (UAVs) and to helicopters, gyrocopters, and other small manned aircrafts
- Operating flight altitude up to 720 m / 2,350 ft
- Scan speed up to 400 lines/second
- 3 faceted mirror (-10, 0, +10°) creates a virtual multilaser for improved mapping of vertical surfaces

- 1) Rounded average PRR.
- 2) Typical values for average conditions and average ambient brightness. In bright sunlight, the max. range is shorter than under an overcast sky.
- 3) The maximum range is specified for flat targets with size in excess of the laser beam diameter, perpendicular angle of incidence, and for atmospheric visibility of 23 km. Range ambiguities have to be resolved by multiple-time-around processing.
- 4) Effective FOV 100°, additional roll angle $\pm 5^\circ$.
- 5) If the laser beam hits, in part, more than one target, the laser's pulse power is split accordingly. Thus the achievable range is reduced.
